Specialists in Acoustic Flooring and House to Flat Conversions

Air Leakage Test Check List

Before we come and carry out an Air leakage Test we need you to check, that the following details have been completed, otherwise you may fail your test or worse still we may not even be able to complete the test in which case you will still be charged 75% of Test fee, unless it is called off due to Item 11 as described below

1. Ensure all doors are fitted and working correctly.
2. Ensure all windows are fitted and working correctly
3. Ensure all electric fittings are fitted and working
4. Ensure 240Volt power is available in each room
5. Ensure all gaps are sealed in walls and floors
6. Ensure we have access to all rooms on all levels
7. Ensure and building work is stopped in the property during entire duration of test
8. Ensure both properties are vacated during the duration of test.
9. Ensure that water is present in soil pipes
10. Ensure all Loft hatches are in place and closable
11. Wind speed must not be above 6ms-1 **
12. Building drawings to be made available to our Test Engineer before the visit to site
13. The Design Air Permeability figure will be required before the visit to site. This can be found within the SAP calculation.

** You will not be charged for the visit if wind speed is above this level

If you have any questions over the above please call me

Kind Regards

Mark Page A.M.I.O.A.

Please note, the success of any acoustic system, will depend entirely on the construction of the existing building and finishing detail, to the extent that we can not guarantee the level of noise reduction that will actually be achieved. It is the clients responsibility to check the quantities of materials ordered are correct as shortages will have to be paid for separately and to check with Local Building Control on actual testing requirements.
